

## ZECHSTEIN RESERVOIRS OF NW EUROPE 15 July and 23 August 2022

Cambridge Carbonates have extensive experience working the **Zechstein** carbonates in the **Southern and Northern Permian Basins of Europe**. The Zechstein carbonate–evaporite petroleum systems are currently gaining increased interest following two recent discoveries in the UK. With the potential for Zechstein acreage being offered in the next NSTA offshore UK oil and gas licensing round, this **1 day workshop** provides geoscientists with **up to date information** on the petroleum systems from the Zechstein basin of the North Sea and onshore Europe.

### Learnings will include:

- Understanding the complexities and approaches to working in mixed carbonate-evaporite successions
- Details of the Zechstein stratigraphy, sedimentology, and depositional environments.
- Insights into the depositional reservoirs and source rocks within the Zechstein, and discuss the impact of diagenesis, brecciation, fracture systems and secondary porosity
- Depositional sequences and diagenetic studies will be demonstrated by a virtual field trip in NE England.

**COST: GBP £475 per person**

To register for a course please go to our dedicated site: [www.cambridgecarbonates.com/summercourses](http://www.cambridgecarbonates.com/summercourses)

Courses will be presented through TEAMS. For further info contact Jo: [jogarland@cambridgecarbonates.co.uk](mailto:jogarland@cambridgecarbonates.co.uk)
