

ZECHSTEIN RESERVOIRS OF NW EUROPE

5 MARCH 2024

Cambridge Carbonates have extensive experience working the **Zechstein** carbonates in the **Southern and Northern Permian Basins of Europe**. The Zechstein carbonate–evaporite petroleum systems are currently gaining increased interest following 3 recent discoveries in the UK. This **1 day workshop** provides geoscientists with **up to date information** on the petroleum systems, with learnings including:

- Understanding the complexities and approaches to working in mixed carbonate-evaporite successions
- Details of the Zechstein stratigraphy, sedimentology, and depositional environments.
- Insights into the depositional reservoirs and source rocks within the Zechstein, and discuss the impact of diagenesis, brecciation, fracture systems and secondary porosity

COST: GBP £475 per person

To register for a course please go to our dedicated site: www.cambridgecarbonates.com/virtualcourses

Courses will be presented through TEAMS. For further info contact Jo: jogarland@cambridgecarbonates.co.uk
