

Carbonate reservoir characterisation workshop

Cambridge Carbonates can offer courses/workshops on carbonate reservoir characterisation, ranging from 1-5 days. The workshop can be tailored to the specific needs of the clients, or can be provided as a more generic workshop. Typically the workshop is held in the clients offices, or can be arranged in conjunction with core viewing or a field trip.

The aims of our workshops are typically to :
Provide an up-to-date review of:

Controls of carbonate sedimentation

- Carbonate depositional systems
- Sequence stratigraphy of carbonate systems
- Seismic expression of carbonate systems
- Diagenesis of carbonates and its impact on carbonate pore systems and reservoir properties
- Log response of carbonates
- Carbonate pore systems and diagenesis
- Carbonate reservoirs types.

Evaluate the essential steps in the exploration and characterisation of carbonate reservoirs

All workshops are supplemented with challenging practical exercises and case histories of carbonate systems and reservoirs that are tailored to the client's area of interest (where possible).
